Tam Tech HF Form Coating

(Epoxy Coating – High Flow - For Protecting Concrete Forms)

Product Description:

Tam Tech HF Form Coating is a two component, high flow, low odor epoxy coating designed for protecting all types of concrete forms. It greatly extends the life of wood, metal and concrete forms and tremendously improves the concrete finish. Tam Tech HF Form Coating is ideal for pre-cast and cast-in-place applications providing a hard, durable surface to protect the forms. It is a 100% solids self-leveling epoxy that does not require a primer.

Features & Benefits:

- Greatly extends the life of wood and metal forms
- Tremendously improves the concrete finish “architectural quality”
- Hard, durable protective coating
- Bonds to wood, steel, Styrofoam and concrete
- Replaces fiberglass or urethane coatings
- Pourable, self-leveling
- Bonds to damp forms
- Zero solvents or VOC’s

Technical Data & Specifications:

Mix Ratio: 3 to 1

Color: Clear when mixed (Colors available)

Solids: 100%

Consistency: pourable

VOC Content: 0 g/L

Working Time: 20-25 minutes at 74 degrees F

Tack Free Time: 4-6 hours at 74 degrees F

Initial Cure: 8-12 hours at 74 degrees F

Compressive Strength: ASTM D-695: 11,100 psi

Shore D Hardness: ASTM D-2240: 81-85

Abrasion Resistance: ASTM D-4060: .28 mg loss after
1000 cycles

Impact Resistance: MIL D-24613: No cracking or delamination

Warranty:

Tamarron Technology warrants for 12 months from the date of manufacture that the product is free of manufacturing defects and conforms to the company's published technical data and specifications. Tamarron Technology shall only be liable under this warranty if the product has been applied, used and stored in accordance with the instructions on this technical data sheet. Disclaimer: Neither manufacturer nor seller has any knowledge or control concerning the purchaser's use of the product. No expressed warranty is made by manufacturer or seller with respect to the results of any use of the product or container that the product comes in. No implied warranties including, but not limited to, an implied warranty of merchantability or an implied warranty of fitness for a particular purpose are made with respect to the product. Neither manufacturer or seller assume any liability for personal injury, loss or damage resulting from the use of the product. In the event that the product shall prove defective, buyer's exclusive remedy shall be as follows: Seller or manufacturer shall, upon request of buyer, replace any quantity of the product which is proved to be defective or shall, at its option, refund the purchase price of the product upon return of the product.

Instructions:

The form surfaces should be clean and sound. Remove all concrete residue, dirt, oil, grease, and other loose materials. A light sanding of the forms will increase bond. Surfaces can be cleaned with a solvent wipe or an application of warm water with a detergent followed by a warm water rinse. Continue cleaning until water will no longer bead up on the forms. Remove all standing water. Then clean with a vacuum or oil-free compressed air. Let dry. Tam Tech HF Form Coating will not bond to a dirty surface. For best results condition material to room temperature prior to mixing.

Premix part A and part B separately. Then mix at a 3-1 ratio for three minutes in a third container with a low speed drill (about 600 rpm) and a jiffy mixer. Do not use high speed mixing, it will whip air into the material. The mixed material should be uniform in color. Mix only what can be used within the working time of 20 minutes at 74 degrees. Then immediately pour the material onto the forms and spread with a trowel, brush, squeegee or a short nap epoxy roller. With a roller, only roll the material once to avoid trapping air in the coating.

Recommended application thickness is 15 mils. One gallon of material will cover about 120 square feet per gallon at 15 mils of thickness depending upon the surface texture. Then after initial cure, apply form release to coating before pouring concrete.

Packaging:

4 gallon kits (4-1 gallon cans), 20 gallon units (4-5 gallon pails) and 220 gallon units (4-55 gallon drums)

Cure Time:

Working time is 20-25 minutes at 74 degrees F. Initial cure is 8-12 hours at 74 degrees F.

Clean Up:

Clean material before it sets up. Use a solvent like xylene.

Limitations:

Store product above 50 degrees F (10 degrees C). Substrate and air temperature must be above 50 degrees F (10 degrees C) during application and during curing. Check the relative humidity and the dew point. The surface temperature should be 6 degrees above the dew point.

High temperatures will accelerate the set time and cold temperatures will slow down the set time.

Shelf Life & Storage Temperature:

Two years in unopened containers stored at 50 to 90 degrees F (10 to 32 degrees C)

Warning:

Skin contact may cause irritation, redness or burns. Remove clothing if contaminated and wash skin thoroughly with soap and water. For eye contact, flush with water for 15 minutes and call a physician.

It is a strong sensitizer so avoid breathing vapors and ingestion. Use safety glasses and wear chemical resistant gloves. Use with adequate ventilation or if ventilation is poor, refer to MSDS for further information. See MSDS for complete information. For industrial use only. Keep out of reach of children.
